Select Anggota Berdasarkan Nomor

The screenshot displays the Postman application interface. On the left, the 'My Workspace' sidebar shows a collection named 'buku' with various API endpoints. The endpoint 'GET selectanggotabykode' is selected. The main panel shows the request configuration: a GET request to 'http://localhost/buku/selectAnggotaByKode.php?nomor=003'. The 'Query Params' section shows a parameter 'nomor' with the value '003'. The 'Body' tab is active, showing a JSON response in 'Pretty' format. The response indicates a successful status (200 OK) and returns member details for the given number.

Request:

```
GET http://localhost/buku/selectAnggotaByKode.php?nomor=003
```

Query Params:

| Key | Value | Description |
|-------|-------|-------------|
| nomor | 003 | |

Response (JSON):

```
{  "status": "success",  "data": {    "id": "3",    "nomor": "888",    "nama": "Laila Alfi Masifah",    "jenis_kelamin": "Perempuan",    "alamat": "Desa Tanah Datar",    "no_hp": "882262457321",    "tanggal_terdaftar": "2023-06-21"  }}
```
